
Cirepil Végétale

Made of 100% natural plant extracts, Cirepil végétale is a fluid honey-like strip wax. It has been clinically tested and scientifically proven to hydrate and moisturize the skin after waxing service. It is a low temperature, fragrance free wax for use on all skin types, hair textures and lengths.

It can be applied in thin uniform layers for cost effective results on larger areas of the body (legs, chest, back and arms).

Ingredients

Glyceryl Rosinate, Sunflower Seed Oil, Shea Butter, Candelilla Wax, Chlorophyllin Copper Complex, Soybean Oil

Active Ingredients

- ◆ Sunflower oil – vitamins A&E to nourish, moisturize, regenerate, soften and calm the skin.
- ◆ Shea butter – to regenerate soften and calm the skin.
- ◆ Candelilla wax for moisture maintaining properties.
- ◆ Chlorophyll for its color.

4 Steps of Preparation for Applying Cirepil Végétale Wax:

1. Always test the temperature of wax on the inside of your wrist. Wax should be close to body temperature for maximum client comfort.
2. Prepare the area to be waxed with and appropriate cleanser for waxing while examining the direction of the hair growth.
3. Protect the skin by massaging a very small amount of an appropriate pre-deplation oil into the area to be waxed (one drop for the face and a few drops for larger areas).
4. Blot with tissue to remove excess oil.

Strip Wax Application

For wax used with strips we recommend the following:

1. Using a wooden disposable spatula, scoop a small amount of wax, scrape/smooth the underside of the spatula against tin to lessen dripping, turn spatula several rotations to disconnect from the tin of wax and lessen dripping.
 2. Deposit the entire amount of wax onto skin. Place the edge of the spatula at a 90° angle away from you, glide the spatula on an angle toward you in the direction of the hair growth. This method will ensure a thin, even application.

-
3. Using a non-woven strip and a light pressure, smooth the strip on to the waxed area several times. While remaining parallel and close to the skin, remove strip quickly in the opposite direction of hair growth. To ensure client comfort, apply pressure to area waxed.
 4. To complete the service, apply appropriate moisturizing lotion or moisturizing oil for a cooling, soothing, and hydrating finish.
