

## **Austrian Green Wax**

---

Mainly used on small body parts for normal to resistant hair, Austrian Green Wax leaves little to no irritation. Classified as a Hot Wax and a favorite among European trained Estheticians, it is derived from beeswax, natural resins, and Azulene.

### **Usage**

1. Heat wax until it flows easily.
2. Stir for consistency.
3. Bath temperature low-medium.
4. Does not have the spread-ability of a soft wax.
5. Use tea tree oil to increase numbing if needed.
6. Apply a light coat of dusting powder.
7. Apply wax in a thicker layer in the direction of the hair growth. If applied too thin it will crack in pieces on removal.
8. The wax will change from a dark green color to a pale green color when dry.
9. Once dry, the wax maybe peeled off like a band-aid strip.
10. Remove with a quick, close pull in the opposite direction of the hair growth parallel to the body
11. Soothe treatment area with tea tree oil.

### **Active Ingredient**

- ❑ Azulene - Anti-inflammatory and soothing.
- ❑ Beeswax - One of the oldest ingredients used in waxing preparations. Also, is credited being an anti-oxidant, anti-inflammatory, and germicidal.
