

Multi-Complex Fade Gel

Sizes Available:
1oz

Product Description:

This efficient spot fader successfully treats hyperpigmentation by suppressing melanocyte (pigment cell) activity while accelerating exfoliation. Applied daily (and followed by proper sun protection, of course!), the serum will diminish dark spots in a matter of weeks. May not be suitable for sensitive skin, patch test first.

Skin Conditions:

For all skin types.

Benefits:

- Proven skin lightening agents
- Reduces inflammation
- Antioxidant properties
- Smooths the skin and help reduce breakouts

Usage: Apply a small amount into affected area until absorbed. Wait 1-2 minutes before applying other products. Begin with an evening application for the first week. If there is no irritation or dryness, increase to twice daily, always following with a sunscreen when any sun exposure is expected. Even a small amount of sun exposure without sunscreen may slow the lightening process.

Treatment Room: Clinical A + Peel

Featured Actives:

Hydroquinone 2% - Suppresses melanocyte activity, thereby reducing hyperpigmentation.

Kojic Acid 2% - A tyrosine (amino acid) inhibitor that also can reduce UV-caused inflammation. It is believed to accelerate wound healing. Kojic acid has been used as a skin-lightener in Japan for many years. It is naturally derived from mushrooms.

Glycolic Acid 5% - Dissolves the intercellular cement responsible for abnormal keratinization. For the treatment of hyperpigmentation, it aids the other active ingredients in penetrating the skin and reaching the target melanocyte cells, as well as exfoliating the surface pigmentation that becomes darker due to sun exposure.

Urea - Known for its anti-inflammatory properties as well as its ability to regulate the hydro lipid mantle. It helps increase the absorption of other active ingredients and relieves itching as well as dissolves follicular debris in the corneum layer.

Multi-Complex Fade Gel

Licorice Root Extract - This botanical extract has been used for hundreds of years for skin care. It is a native from Europe and China. Its benefits include suppressing melanin formation in the skin and it is considered an antioxidant. It is non-allergic, non-irritating, soothing, anti-inflammatory, and has an effect similar to hydrocortisone.

Willow Extract - Has been used for centuries. It is a very mild, but effective ingredient. Its most common properties are antiseptic, astringent, and anti-inflammatory. Willow extract comes from the bark of the tree and produces salicin, which is a glucoside, salicylic acid. It may also help reduce skin irritation.
