

Cosmetic Brush Cleaner

Ingredients

Trichloroethylene, 1,2-Butylene oxide.

Procedure

1. Dampen a section of a paper towel with Fast Drying Brush Cleaner and wipe brush from side to side.
 2. As the towel gets dirty, dampen another section and repeat. Not only will this clean the brushes, but the Brush Cleaner evaporates quickly for a clean brush that's ready to go.
 3. Be careful not to let any cleaner run inside the ferrule (the metal part of the brush between the hair and handle). This can weaken the glue used to hold the hair and cause shedding problems or even loosen handles.
 4. Always lay brushes flat to dry.
