
Disincrustation Lotion

Description

Disincrustation Lotion is a special lotion that helps soften and melt the dirt and grease that forms clogged pores, blackheads, and pimples. This unique formula, containing soapwort, clary sage, and mistletoe works by liquefying the bond between the sebaceous cells and the clogging material, making extraction and elimination possible. Can be used with the galvanic unit, a steamer, or an electric mask. pH - 8.3.

Skin Type: For all skin types. To be used on clogged pores, oiliness, blackheads, and pimples.

Benefits:

- ❑ Melts the oiliness around the edges of the pores, making extractions easier.
- ❑ Non-irritating, non-drying formula

Ingredients

Deionized Water, Balm Mint Extract, Triethanolamine, Witch Hazel Distillate, Sage Extract, Capryloyl Glycine, Saponins, Sodium Lauroyl Sarcosinate, Saponaria Officinalis Extract, White Mustard Blend, Balm Mint Extract, Peppermint Extract, Burdock Extract, Algae Extract, Clary Sage Extract, Mistletoe Extract, Algae Enzymes, Mallow Extract, Lactic Acid, Polysorbate 20, Phenoxyethanol (and) Methylparaben (and) Butylparaben (and) Ethylparaben (and) Propylparaben.

| | |
|--------------------|---|
| Algae Enzymes | Enzymes that are found in different types of algae. Help break up oils. |
| Algae Extract | Active substance used to normalize the skin's moisture content. Provides suppleness and firmness to the epidermis. |
| Balm Mint Extract | Also known as the Balm of Gilead. From a small evergreen. Soothes and heals the skin. |
| Burdock Extract | Contains many minerals. Soothes the skin. |
| Butylparaben | Preservative - generally used in combination with other preservatives. Only effective in the acid pH range. |
| Capryloyl Glycine | Fights bacteria. Controls the secretion of sebum. Helps prevent and treat acne. Helps transport active ingredients. |
| Clary Sage Extract | Has soothing and anti-inflammatory properties. |
| Deionized Water | Water that has had the ions removed. |
| Ethylparaben | Preservative. |
| Lactic Acid | An alpha hydroxy acid found in sour milk. Used as a preservative, exfoliant, and moisturizer. Also provides acidity to formulations. Increases the water-retention capacity of the stratum corneum. |
| Mallow Extract | Has anti-inflammatory, soothing, refreshing, emollient, and wound healing properties. |

| | |
|----------------------------------|--|
| Methylparaben | Preservative used to combat bacteria and molds. |
| Mistletoe Extract | Has antispasmodic, healing, and calming properties. |
| Peppermint Extract | Helps relieve skin irritation and itching. Reduces skin redness due to inflammation or acne. Cools by constricting capillaries. Has refreshing and tonic properties. |
| Phenoxyethanol | Broad range preservative with fungicidal, bactericidal, insecticidal, and germicidal properties. |
| Polysorbate 20 | A solubilizer, emulsifier, viscosity-modifier, and stabilizer of essential oils in water. |
| Propylparaben | Frequently used preservative against bacteria and mold. |
| Sage Extract | Possesses softening, invigorating, and healing properties. |
| Saponaria Officinalis Extract | Obtained from an herb that foams like soap bubbles when scratched. Used as a substitute for soaps. |
| Saponins | Derived from sugars that are found in some plants. Characterized by their ability to foam in water. Used chiefly as a foaming and emulsifying ingredient and detergent. Used to reduce surface tensions. |
| Sodium Lauroyl Sarcosinate | Has the ability to foam. Widely used in shampoos and cleansers. |
| Triethanolamine | An emulsifier and pH adjuster. |
| White Mustard Blend | Used as a counterirritant. |
| Witch Hazel Distillate | Has anti-inflammatory and wound healing properties. Often used for its anti-itching, softening, and emollient properties. |

Usage Instructions

With the Steamer:

1. Soak cotton compresses with the Disincrustation Lotion and apply to the areas of the skin where clogged pores are present.
2. Steam for 10 - 25 minutes depending on the severity of oiliness.
3. Use astringent to remove the oiliness emulsified by the Disincrustation Lotion from the surface of the skin.
4. Proceed with the extraction, squeezing blackheads, pimples and clogged pores.

With the Galvanic machine:

1. For disincrustation, use the negative current.
2. Apply Disincrustation Lotion to a gauze mask or to cotton compresses and pass the attachment slowly over the oily areas for about 4-6 minutes.
3. Proceed with the extractions as above.

With the electric mask:

1. Apply the Disincrustation Lotion to compresses of cotton or to a gauze mask, on the oily areas.
2. In the dry areas, apply a generous amount of penetration/hydrating cream or lotion.

-
3. Place a wet tissue soaked chamomile tea or water on top of the Disincrustation Lotion and the penetrating creams, making a small hole for the nose area.
 4. Leave the heating mask on for 12 - 20 minutes.
 5. Proceed with the extractions as above.
