

Lipid Recovery Serum

Lipid Recovery Serum (LRS) has the unique ability to create a hydrating effect in skin, which can reduce fine lines and lessen the appearance of wrinkles. LRS does this even though it contains no water in the formulation. Unlike a typical cream or lotion that contains water and only temporarily hydrates the skin, LRS increases the skin's intrinsic moisturization. LRS repairs the lipid barrier in the skin so that it can hold more water, improving skin cell function and improving skin health.

Usage

- ❑ Reduces redness and inflammation, calms, moisturizes and reinforces skin which has been adversely affected by peels, facials, waxing, and or harsh environment.
- ❑ Sphingolipids compose 49% of the lipids in the stratum corneum of human skin, and are thus the major structural lipids in the lipid barrier. An intact lipid barrier is necessary for optimal cell function and for preventing disease-causing agents from penetrating into the dermis. Replacement of damaged or lost sphingolipids is essential to maintaining skin health and reduction of TEWL (Trans-Epidermal Water Loss).
- ❑ LRS contains naturally derived Peroxidized Corn Oil, which is a potent anti-inflammatory and analgesic agent. In clinical studies, significant diminution of erythema was observed after 48 hours of use. It also was determined to be effective in reducing itching and burning of irritated skin.
- ❑ Skin must be thoroughly cleansed
- ❑ Twist tip off of LRS Ampoule and apply with finger tips to affected area of skin
- ❑ May be applied both day and night as needed.
