
Aluminum Oxide Microdermabrasion Crystals

Description

Use these medical grade crystals in ANY microdermabrasion system without clogging! They are purified by a 5-stage sifting and cleaning process to extract larger particles often found in bulk bags. The talc or filler, which is also added to bulk bags, is carefully evaluated to meet high quality standards. Aluminum Oxide is inert and does not cause any skin reaction. As a result, it is an excellent abrasive medium for microdermabrasion. Excellent for facial exfoliation. Available in 100 grit and 120 grit.

Benefits:

- ❑ Inert, does not cause any skin reaction.
- ❑ Excellent abrasive medium for microdermabrasion.
- ❑ Outstanding exfoliant because is a hard, stable crystalline sand-like material.
- ❑ Absorbent - each aluminum oxide particle strikes the skin, gently exfoliates, absorbs surface oil, and is vacuumed away again.
- ❑ Medical grade crystals, purified by a multi-stage sifting and cleaning process.

Ingredients

Aluminum Oxide, Talc.

Usage Instructions

Use as directed in your microdermabrasion unit.
