

Steam Room Oils

Steam Room Oils are in concentrated form and should be diluted to the strength required to suit the specific steam room or other desired application. It is solubilized so that you can dilute it in water. To use, add oils (after diluting to appropriate strength) to dispenser located in your steam generator or oils may be used in a spray bottle.

Suggested concentration:

2 oz. per gallon (1 kg makes 17 gallons)	Very subtle, mild
4 oz. per gallon (1 kg makes 8.5 gallons)	Effective
6 oz. per gallon (1kg makes 5.5 gallons)	High strength

Oils should be used in moderation, as too high a strength can irritate eyes and possibly skin.

Dilute steam room oil to required strength in water, and then add to the steam room or fragrance dispenser.
