

## D-MS07 Assembly Instructions for the Stand

1. D-MS07 machine comes with two metal brackets pre-attached to the bottom of the unit. Carefully position the machine on top of the stand. Align the two screw holes in the brackets to the holes in the stand and tighten with a screwdriver.

2. Behind the machine there is an electric socket. Just below that, hanging from the stand, there is an electric cord. Simply plug in this electric plug into the socket behind the machine.

There is a separate electric cord which plugs into the base of the stand and to an electric outlet on the wall.

You are now done with the stand assembly. Please refer to the D-MS07 Manual to set up your machine.
