ACTIVE INGREDIENTS

Caffeine - The most efficient active in body cosmetics because of its lipolytic action. Indeed, it is able to promote the degradation of tryglicerides in the adipocytes by reducing their volume and prevent absorption of carbohydrates.

L - Carnitine - Naturally contained in the cells of our organism, it stimulates the body to use the fats causing their reduction.

Phosphatidylcholine - An optimal water binding ingredient able to improve penetration of other ingredients into the skin. It has lipase activity.

Bromelinae (Bromelain) - The proteolytic enzyme contained in pineapple stem cells. It promotes the elimination of liquids in excess, stimulates the cells and collagen regeneration.

Bioflavonoids - Natural chemical compounds particularly known and appreciated as antioxidants due to their capacity to block the cell damage caused by free radicals.

INFO

Athermic treatment. Optimal to combine with Arossha pressotherapy + ultrasound/Waveshape 2.0

2 bandages - 250 ml/each
10 cm x 10 m in extension
(46% viscose - 54% polyamide)
