

Magic is in the Minerals!

Self-Heating Technology

Ingredients:

Food-grade magnesium, iron, salt & absorbents activated by water. Non-toxic.

Self-Cooling Technology

Ingredients:

Natural urea & absorbents activated by water. Non-toxic.

Sustainable Technology

therma**bliss**® Self-Heating Charges use Lava Gel®, is a proprietary blend of vitamin-grade iron and magnesium, food-grade salt, water, and absorbents.

All ingredients are inert and non-toxic. After the heat reaction of the natural minerals, a spent charge is approximately 96% compostable by weight with the balance of 4% consisting of the degraded absorbents that remain both inert and non-toxic.

The heating process converts magnesium and iron into magnesium hydroxide – known commercially as "milk of magnesia", a common antacid – and Iron Oxide. Both compounds are used in agricultural soil amendments to fertilize and help plants grow.

The absorbents are also used agriculturally as soil amendments to improve water retention around plant roots and to help reduce water use in farming, parks, and golf courses. Of note, this absorbent class is also an FDA approved ingestible used in diet pills to absorb stomach liquids, create the sensation of fullness and then, pass safely through the human digestive tract.

therma**bliss** Charges, powered by Lava Gel®, safely deliver reliable non-electric, flame-free heat for up to 90-minute thermal wellness treatments. They are non-toxic, inert, and environmentally sustainable.

100% Safety Record

Since 2006, therma**bliss** solutions have never had a reported burn incident.

Lava Gel is patented and sold under exclusive license from Forever Young Enterprises, Inc.
