

Cleaning & Maintenance Instructions

Bloomy Lotus Bamboo Nebulizer (BML005)

1. Remove your current essential oil bottle from the nebulizer by pushing it up at the bottom.
2. Fill the empty bottle (included with your purchase) with rubbing alcohol. *The rubbing alcohol should be under 75% concentration.*
3. Slide the bottle containing rubbing alcohol into the back of nebulizer, plug in the nebulizer, and let it run for 5 minutes.
4. Remove it from the nebulizer. Then, screw off the nozzle top cover.
5. Dip a cotton swab in the rubbing alcohol and brush softly to clean the nozzle.

Important

- Never use alcohol with over a 75% concentration, as this can cause damage to the nebulizer.
- Alcohol is flammable—only use in well-ventilated areas.
- For best results, clean the nozzle 1-2 times per week.
- Always clean the nozzle and change the oil pipe before switching to a different type of essential oil.
- Aroma strength will vary depending on nebulizer settings and different types of essential oils.
- Only use pure, natural essential oils to prevent damage to the nebulizer components.
