### **Gehwol® Callus Softener Foam**

Gehwol Fusskraft Callus Softener has 25% urea. This liquid product is changed by means of a dispenser system into a fine-pore foam containing concentrated urea and lactic acid. It does not use a propellant. It is used for precise and rapid softening of hard skin. After just five minutes, the softened, hard skin can be easily removed, which means the treatment takes considerably less time. The foam that is produced remains stable on the skin and does not swell up. This means that there is no unintended softening of neighboring skin areas. Non-fragranced. Antimicrobial.

#### **Benefits**

- ◆ Precisely and rapidly softens the skin so calluses can be removed easily.

#### **Ingredients**

Aqua (Water), Urea, Triethyl Citrate, Sodium Lactate, Cocamidopropyl Betaine, Lactic Acid, Sodium Chloride, Phenoxyethanol, Dehydroacetic Acid, Benzoic Acid, Sorbic Acid

#### **Active Ingredients**

Urea	Has a bactericidal, antipruritic effect. Helps smooth calluses and regulate the balance of the skin. Produced naturally by the body.
------	--

#### **Procedure**

1. After soaking the feet in the Gehwol Herbal Bath for 5 minutes, pat the feet dry.
  2. Apply the Foaming Callus Treatment.
  3. Rub into affected areas.
  4. Continue with the pedicure, filing away the calluses.
