Acrylates/C10-30 Alkyl Acrylate Crosspolymer	An emulsifier for oil-in-water emulsions. Has thickening and formula-stabilizing properties similar to carbomer. Allows for the release of the oil phase component of a product as soon as it is rubbed into the skin.

Glycerin	A solvent, humectant, and emollient. It absorbs moisture from the air.
Hyaluronic Acid	A substance that occurs naturally in the dermis. It is a natural moisturizer with excellent water-binding capabilities.
