

Little Details, Big Difference.

Our densely woven microfiber sheets are sumptuously soft and feature ultra-high stitching for maximum durability. Wash after wash, they maintain their luscious sueded feel and shape.

CARE INSTRUCTIONS

| | |
|--|--|
| | 1. PRE-TREAT OIL STAINS, IF NECESSARY, WITH A STAIN REMOVING SOLUTION. |
| | MACHINE WASH PERMANENT PRESS CYCLE WASH ON COOL TEMPERATURE SETTING. DO NOT USE BLEACH. |
| | DRY PERMANENT PRESS CYCLE, DRY ON LOW TEMPERATURE SETTING. REMOVE PROMPTLY. |
| | IRON IF NECESSARY, USING THE POLYESTER SETTING. |

DO NOT USE BLEACH

(Chlorine bleach solutions below 12% are acceptable when used sparingly, but not recommended.)

TIPS AND IMPORTANT NOTES

- Pre-treat oil stains and oily residue as soon as you can and allow to sit for at least five minutes. For tougher stains, consider using a pre-wash enzyme treatment (see reverse).
- Do not use liquid fabric softener or dryer sheets. These tend to act as wax and clog the micro spaces and fibers.
- Wash separate from other fabrics such as cotton or fabrics that shed, as this can potentially clog microfiber pores. Wash alone or with other lint free materials.
- Avoid washing with colors that might fade onto your microfiber sheets.
- Wash on low temperature setting. This preserves the material's structure and prevents piling and balling.
- Avoid using bleach to help the microfiber stay strong and last longer. Keep away from acetone and other strong acids, as they can shatter nylon fibers. (Clean rinsing liquid detergent is better than powder detergent.)
- Dry on low and cool settings. Drying on warm/hot or over drying microfiber will cause shrinkage and can damage the material. (Drying time is approximately 15 minutes or less, depending on load size.)
- Remove promptly at end of drying time to prevent materials from sitting on hot metal dryer drum for an extended period of time.
- With proper care and maintenance, your microfiber sheets can last 300-500 washes.
