## 216 Beauty Scope

*Thank you, for buying a PARAGON® product. We are confident that you will be happy with our quality and stand by to provide any after sales service you may need.*

As men and women have become more concerned with grooming, beauty, health and the effects of pollution on the skin. So if they can clearly see their skin conditions, the suggestion of skin care treatment should be easier to be accepted. The design of the 216 Beauty Scope is just for this aim. It is a revolutionary skin microscope that magnifies skin on the screen of a TV set or a monitor. The images provided are vivid and in high clarity. The aesthetician and the customer can observe the skin condition together, by analyzing and offering sincere recommendations. The aesthetician and the salon will establish a new level of understanding and build up a new level of trust, thus improving the salon's standard and uplifting the salon-going experience.

- Skin analysis is the basis of skin care treatment and improves a salon's reputation and image!

- Beauty Scope is the new strategy in skin analysis.

- Increase the level of trust with customers and maintain long-term relationship with client.

The 216 BEAUTY SCOPE's guided cool light surrounds the lens and automatically provides the best illumination to enable you to obtain the optimum viewing angle and color of the target object:

- Healthy Hair
- Heavily Damaged Hair
- Chemically Damaged
- Sensitive / Pigmentation of Skin
- Broken Capillaries
- Pustule / Mila

(Optional: 50x Lens for Face or 200x Lens for Hair Scalp)

Position the lens

(unlock)

(lock)

- A. Power Switch
- B. Video Output
- C. AC/DC Power Cord
- D. Beauty Scope Connector

Beauty Scope Holder

Freezing/Releasing Picture

Installation is now completed. Turn the (A) power switches on both the 216 Beauty Scope and the monitor to the "ON" position.

When you are using Frame/Release Picture function, you can press the freeze button (on the hand probe) to freeze image; to release the froze image, just press the button again.

Image retention on hard copy and image storage are possible by simply connecting the video output of the 216 Beauty Scope directly to an optional Video Cassette Recorder (VCR), Color Video Printer or Personal Computer (PC with appropriate turner card installed).
